Education

The University of Texas at Dallas — Richardson, TX
Bachelor of Science in Computer Science, Minor in Finance — Graduation: May 2028
Coursework: Computer Architecture, Distributed Systems, Fundamentals of AI, Data Structures, Database Systems, Software Engineering

Experience

SailPoint — Austin, TX
Full Stack Software Engineering Intern — June 2026 - August 2026

- Built an AI identity risk scoring simulator evaluating four risk dimensions across 50+ signals using time-decay scoring
- Developed a **Go REST API** with **JWT** auth and **JSON** serialization, cutting response latency from 312ms to 278ms
- Deployed the simulator to dev environments via Docker, nginx, and Jenkins, enabling 40+ engineers to run assessments
- Restructured a **Redis** token-bucket API throttler, migrating from per-tenant isolation to global, burst-configurable limits
- Architected a distributed system using Kafka to fan out risk score updates across 10+ microservices

UTD Nebula Labs (Open Source) — Richardson, TX
Full Stack Software Engineer — May 2024 - Present

- Integrated Rate My Professor **API** data into the professor search module, surfacing 8,000+ records with review sentiment
- Cut database query response times from 143ms to 97ms through query result caching and schema denormalization
- Effectively communicated with a team of ten through **JIRA** and **Confluence**, using **Github** branches to optimize workflow

Goldman Sachs — Dallas, TX
Software Engineering Apprentice - Engineering Leadership Series — December 2025 - April 2026

- Introduced a Mutual Fund Calculator using **FastAPI** and **Angular** with Monte Carlo simulations and CAPM modeling
- Halved projection error (14.2% to 7%) by validating the model against 5-year historical backtests
- Developed **Python** backends handling 3,247 peak requests/min; validated 300 concurrent users via Locust load testing

Serent Capital — Austin, TX
Cyber Security Intern — May 2024 - August 2024

- Built a **Python** automation tool using the Datadog **API** for real time cybersecurity risk assessments and monitoring
- Reduced incident response time from 47 to 34 minutes over manual workflows via automated anomaly detection alerts
- Presented 20-slide **cybersecurity** findings to 4 C-suite members, translating technical risks into business impact

Ojo Labs — Austin, TX
Full Stack Software Engineering Intern — May 2022 - August 2022

- Developed relationship timeline enabling 14,000+ agents to view interaction history, improving real estate engagement tracking
- Migrated 80% of active users to internal relationship tooling via scalable MVP, handling 2,100+ peak users.
- Implemented **API** integrations with third-party services, using token-based authentication and **RESTful** endpoints

Projects

Adjacent – AI Agent Project Management - HackUTD Winner | *NVIDIA Nemotron, Next.js 14, TypeScript, Supabase, Tailwind*

- Built a 3 agent NVIDIA Nemotron pipeline to decompose goals, extract entities, and generate tasks for a live board.
- Added server side orchestration with a re prompt retry loop and JSON validation to ensure structured LLM outputs.
- Created an intuitive dashboard allowing users to review, edit, and approve agent proposed tasks before database insertion.

CourtPulse(Distributed System) | Amazon S3, RDS, Lambda, Bedrock, SNS

- Publicly hosted an end-to-end agentic AI distributed system for fantasy sports enthusiasts using Amazon S3, RDS, Lambda, and Digital Twin Maker to simulate 100+ live games, model real-time player shifts, and proxy into live box score monitoring systems
- Stored and retrieved 100+ player and matchup records through RDS and Lambda websockets; used Amazon Lex V2 and Bedrock to create agentic lineup recommendations across leagues and trigger Lambda scripts for automated trade alerts

Technical skills

Programming | Python, Go, SQL, C++, Java, Javascript
Frameworks - Libraries - Cloud - Infra | Next.js, React, Node.js, FastAPI, Pandas, Azure, Jenkins, Docker, Redis
Tools & Platforms | Docker, Git, Grafana, Supabase, Firebase, MongoDB, PostgreSQL, SQLite, Unix/Linux
